## 1 INTRODUCTION OF THE ENTREPRENEDU MENTORING PROGRAMME

This section introduces the ENTREPRENEDU Project and its objectives. Further, it focus on the First Hackathon foreseen within the programme, i.e. the Hackathon in Rimini, Italy and its winners as well as the mentoring organizations and their experiences and expertise are highlighted.

The concept of ENTREPRENEDU is focused on closing the innovation and educational gap between different regions of the EU one important tool to do so is the creation of a highly replicable and scalable Venture Building Program, an educational model for the European entrepreneurial ecosystems that will be validated at the end of the project in 3 different educational entities.

The foundation for the Venture Building Program will be laid by a mentoring program that takes in the 12 teams and start-ups selected during three Hackathons in low to medium-innovation countries of Greece, Italy and Bulgaria. At each Hackathon different teams and start-ups compete to deliver solutions for pressing issues in the European Union. The four most promising ideas at each Hackathon will be selected and take part in the ENTREPRENEDU mentoring program as a cohort. Hence, there will be three cohorts in total each one consisting of 4 teams and start-ups.

The first Hackathon took place in Rimini, Italy from the 15<sup>th</sup> to 17<sup>th</sup> of June. The participating teams and start-ups pitched their solution addressing three main challenges in the European Union namely **innovative space technology**, **sustainable food systems** and **climate change**. In total eight solutions were pitched to the jury consisting of the consortium partners, Fondazione E. Amaldi (FEA), European Business Angel Network (EBAN), Fraunhofer IPK, Corallia, Cleantech Bulgaria (CTBG), LUISS and F6S. Each partner organization evaluated the pitches on the following criteria:

- FEA: Evaluate Technology Transfer and IPRs
- EBAN: Establish Investor interest
- Fraunhofer IPK: Establish Business viability
- Corallia: Evaluate the market attractiveness
- CTBG: Establish the possibility to access Funding opportunities
- LUISS: Defining the impact in the education sector & Evaluate Team quality and completeness
- F6S: Evaluate branding and marketing

The names of the four winning teams of the first Hackathon are As You Like, Backwards, BOBIS and Shades of Blue. Among these teams, the first two are currently in the ideation phase, working to evolve their concepts into viable businesses, while the latter two are established enterprises. Comprehensive information regarding their respective businesses and ideas can be found in Section 4.1 of this report.

Further, six of the consortium partners will become mentoring organizations. They all possess unique experiences and expertise that they can share with the winning teams and start-ups to

support them in their endeavours and have been determined before the first Hackathon. Fondazione E. Amaldi is expert in evaluating technology and developing new products as well as financial instruments for which a clear understanding of the technology is paramount and can provide valuable lessons on technology due diligence and the step from technology feasibility to product development. Fraunhofer IPK undertakes applied research of direct utility to private and public enterprises and of wide benefit to society their mentoring expertise centres around the topics of business model, strategy and intellectual capital development. The European Business Angels Network is the Pan-European representative for the early-stage investor community gathering over 100 member organizations in more than 50 countries today. Their vast network allows them to provide valuable insights on the topics of investment readiness & approach, pitching & quantifying funding needs and the preparation of legal documents for investments and company valuation. Further, Cleantech Bulgaria is a business network in Bulgaria that focuses on clean technologies, innovation, and sustainable development. Their expertise lies in the field of accessing finance and related funding. Corallia is one of the main pillars of the Greek innovation ecosystem that implements flagship programs and targeted interventions to support entrepreneurship across Europe. They are experts in business planning, evaluating the readiness levels of companies and solutions and developing investment pitches. Lastly, LUISS is an independent university from Rome, Italy that provides an innovative and sophisticated educational approach that they can leverage to deliver sophisticated insights on problem & solution validation as well as on the topic of value proposition.

Besides the expertise of the mentoring partners, the content of the program will be structured to the needs of the winning teams and start-ups. Thus, a demand analysis was conducted with the four winners of the first Hackathon in Rimini, Italy. Additionally, the mentoring partners evaluated the current state of the four winners to provide an outside perspective and render the mentoring program to the most pressing needs of the participants. Hence, this deliverable will first provide an overview of the rationale and structure of the exercised demand analysis. Further, the results of the demand analysis will be presented from them derived from the mentoring topics, structure and curricula. Subsequently, the implementation plan of the mentoring program and the evaluation process will be described. Lastly, a conclusion will be provided.

The deliverable aims to provide an in-depth understanding of the creation of the mentoring program utilizing a demand analysis, to generate a structure and curricula for the mentoring process. Due to the rescheduling of the mentoring program from summer 2023 to autumn 2023, which was jointly decided by the consortium to avoid the holiday seasons, this deliverable was envisioned to provide valuable insight into the creation process of the mentoring programme.

## 2 METHODOLOGY: DEMAND ANALYSIS AND DERIVATION OF MENTORING PROGRAMME

In this section, the structure and purpose of the applied demand analysis will be explained. Further, the outcomes of the need analysis will be discussed and the mentoring partners will provide their perspectives on the state of the four winners of the Hackathon in Rimini, Italy.

A demand analysis is a vital step in developing a successful mentoring program. It ensures that the program is tailored to meet the specific needs of the participants, maximizing its impact, relevance, and sustainability. By understanding and addressing the teams' and start-ups' needs, unique challenges, goals, and aspirations the mentoring program becomes a powerful tool for fostering growth, innovation and success. Further, a demand analysis helps to set realistic and achievable goals for the mentoring program and allocate resources efficiently. Clear and achievable objectives enhance the motivation of both mentors and start-ups, leading to a more successful and rewarding program.

The methodological approach utilized for the derivation of the mentoring programme relied on a qualitative research design, namely semi-structured interviews. This approach was selected due to its capacity to delve into the experiences, perceptions, and insights of the participating teams in a comprehensive manner, which in turn informs the creation of a tailored and needs-oriented mentoring programme.

The data collection took place on 30th June 2023. The process comprised online interviews with representatives from each of the four selected teams that constitute the first cohort of the programme. Each interview session lasted for one hour, aiming to capture an in-depth understanding of the participants' experiences and needs. The interviews were conducted by two researchers and one research assistant from Fraunhofer IPK to ensure consistency in data collection and interpretation. Prior to the data collection, an interview guideline was prepared to establish a clear direction and framework for the interview. The guideline was structured around eight key dimensions, namely:

1. **Business Objectives and Goals:** To determine the teams' aspirations and their feasibility.
2. **Resources & Support:** To ascertain the support and resources the teams currently have at their disposal and what they anticipate needing throughout their entrepreneurial journey
3. **Product or Service Evaluation:** To evaluate the teams' existing products or services and discuss potential areas of improvement or development.
4. **Target Group:** To understand the teams' client base, composition, and preferences.
5. **Challenges & Problems:** To uncover the main difficulties and hurdles the teams are currently facing or anticipate encountering in the future.

6. Trends & Innovation: To gain insights into the teams' awareness and understanding of industry trends and innovative practices relevant to their business ideas.
7. Knowledge, Know-How & Attitude: To assess the existing skill sets, knowledge, and attitudes within the teams, as well as identify potential gaps or areas for further development.
8. Learning Objectives: To identify the teams' aspirations and goals for the mentoring programme.

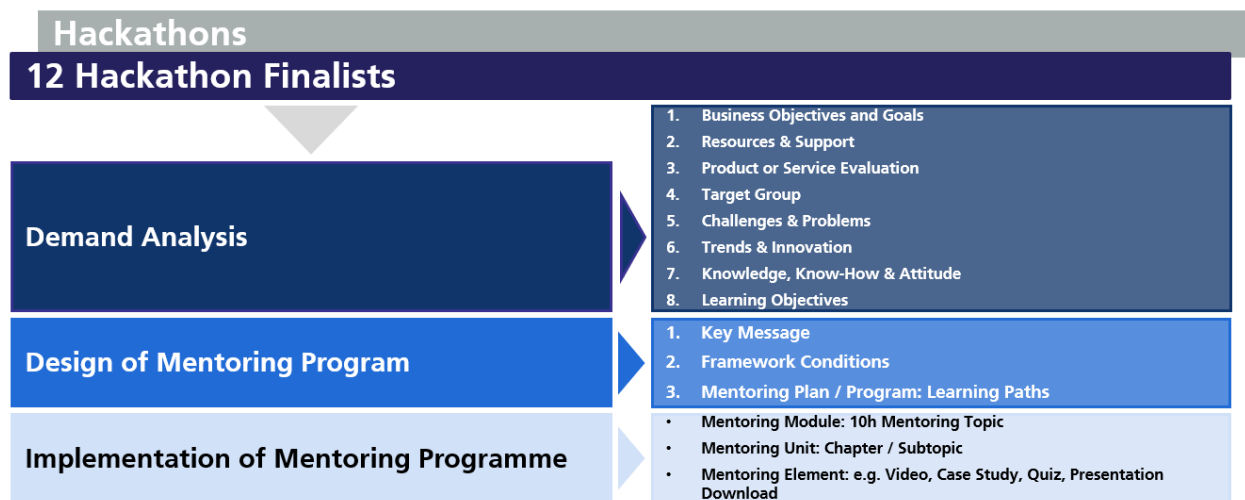

FIGURE 1: Demand Analysis Structure

All interviews were conducted with respect to ethical considerations, including voluntary participation, confidentiality, and privacy of the participants. Each interview was protocolled by two researchers to allow an accurate analysis of the data. Figure 1 highlights the framework of the demand analysis and the subsequent design and implementation of the mentoring programme.

Subsequently, the data from the interviews were analyzed using thematic analysis. This method was employed as it provides a flexible and useful research tool for identifying, analyzing, and interpreting patterns of meaning ('themes') within qualitative data. The themes derived from this analysis process served as a basis for the derivation of the mentoring topics, thereby ensuring that the curriculum is tailored to meet the specific needs and learning objectives of the teams.

Following the data collection, the subsequent stage involved an in-depth analysis of the responses obtained from each of the four participating teams. This was done through a thematic analysis, which was executed in several stages. Based on the protocols of the interviews, we carried out a process known as 'open coding'. This is the first step in qualitative data analysis and it involves identifying and defining themes that emerged from the interviews. In this process, we read through the protocols and labelled segments of the text that encapsulated key thoughts or concepts. After coding the protocols, we examined these codes

for patterns and began to sort them into broader categories. This stage is often referred to as 'axial coding' and it involves the clustering of related codes to identify the main themes. These themes were then compared across all teams to identify shared or unique demands.

Having established the main themes, we then embarked on the critical task of matching these themes with the selection of pre-defined mentoring topics. To ensure this process was rigorous and transparent, each theme was revisited in the context of the questions in the interview guide and the specific challenges and learning objectives expressed by the teams.

The six derived mentoring topics formed the basis for curriculum development. Each mentoring topic was used to create a separate module. The specific learning objectives within each team guided the content within each module, ensuring the curriculum remains tailored to the teams' needs. In this manner, the mentoring topics and the subsequent curriculum were directly linked to the identified needs of the teams, providing them with targeted guidance that would be most beneficial to their startup journey. The curriculum was thus designed to be a dynamic, responsive entity, capable of being adapted to the learning needs of any cohort of teams.

### 3 RESULTS OF THE DEMAND ANALYSIS

---

The following section provides detailed insights into the results of the demand analysis as well as the derived mentoring modules. In order to ensure the confidentiality of the results of the demand analysis, the names of the teams will be anonymized in the following.

---

#### 3.1 DEMAND AND LEARNING OBJECTIVES OF EACH TEAM

---

The demand analysis and subsequent interviews with the four start-up teams revealed a variety of learning objectives and demand specific to each team, shaped by their unique business contexts, challenges, and long-term goals. After an introduction of the team, the demand and learning objectives are presented as follows:

##### 1. Team A

Team A aims at offering a solution to the problem of a low variety of food options at restaurants. The aim is to create an innovative, multisided business catering service, app with which the end customer can, create a customized meal, balancing optimally balance the nutritional elements, obtain complete nutritional information on the food ordered, consume famous recipes revised from a healthy perspective and reduce food waste by ordering exactly the needed quantity.

In terms of *business objectives and goals*, the team aims to launch their business in 2024 and start generating profit by 2025. This demonstrates a forward-thinking approach, but they might need guidance on strategy and planning to achieve these goals.

*Resources and Support* are characterized by nine developers and some international investors' contacts, with one agency assisting in service launch. This indicates a strong resource base but suggests that they could benefit from further guidance on resource management, investor relations, and strategic partnerships.

The team plans to test and validate their *product* via a simple valuable product, focusing on customization. However, they lack enough information at present, despite having conducted a survey with potential customers. This suggests a need for further assistance in product testing and validation, as well as market research methods.

The team has identified two distinct *target groups*: Individuals interested in healthy eating options and restaurants open to implementing their idea. This reflects an understanding of their target market but might require support in how to engage these different customer segments.

In terms of *challenges and problems*, the team anticipates considerable challenges in terms of validation and implementation of their value proposition. Market analysis, as well as addressing legal concerns, are also identified as prominent issues. This suggests that they need guidance in legal aspects and conducting market research efficiently, as well as sharpening their value proposition.

When it comes to *trends and innovation* that influence their business idea, the team recognizes the importance of emerging trends such as Visual AI and the potential application of blockchain. They also note an increasing concern for healthy eating among Italians. This indicates that they are somewhat aware of the current technological trends and customer behaviours, but they may need assistance in applying this knowledge effectively to their business model.

About *Knowledge, Know-how, Attitudes*, the team boasts technical, and programming expertise, while they acknowledge gaps in culinary, nutritional and legal knowledge, despite one member having a finance/business background. This points to a need for comprehensive business and legal education to augment their existing skills.

As *learning objectives*, the team aims to improve their networking skills for better idea generation and funding, set up a viable business model, establish financial plans, and learn new techniques for startup growth. They also express interest in learning about finding suitable funding options. This underscores the importance of incorporating these aspects into the mentoring programme.

## 2. Team B

Team B was formed at the Hackathon in Rimini by two participants. They want to tackle the issue of waste generated from food delivery packaging through the introduction of a re-usable container. This concept could be introduced at restaurants for take away orders or food delivery.

The team lacks clear *business objectives* due to their limited knowledge of business management. This highlights the urgent need for training in business planning and goal setting. In terms of *resources and support*, the team is currently supported by friends and family and has access to a significant number of local restaurants. This shows a foundational support network and potential initial customer base but suggests a need for learning how to capitalize on these resources effectively.

For their *product and service evaluation*, the team plans to evaluate competitors' products and derive insights into their offerings. They aim to enhance user-friendliness through an app or online function. This points to a need for competitive analysis skills and user experience design training.

As a *target group*, the team targets the younger generation in Italy, particularly those residing in cities and concerned about the environment. They believe this demographic to be more adaptable, technologically driven, and environmentally conscious. This suggests a need for guidance on engaging this specific target group effectively.

The demand analysis showed that the team perceives a significant *challenge* in business development knowledge, especially regarding the cost structure and customer needs identification on a broader European scale. They also recognize the challenge of creating market demand for their product. This suggests that they would benefit from training on business development, market analysis, and customer identification.

A major *trend* that influences their business idea is the growing interest in the circular economy among young Italians. This indicates their awareness of societal shifts and provides an opportunity to explore more sustainable business strategies.

Concerning *Knowledge, Know-how, Attitudes*, the team's expertise lies in IT and marketing, but they express a need for guidance to develop a robust business strategy and plan. This indicates a gap in strategic business planning skills that the mentoring programme should address.

In terms of *learning objectives*, the team aspires to receive practical advice from mentors and gain confidence in the global startup world. They express interest in learning about business canvas creation, funding acquisition, pricing, market research, and defining the business model. This highlights the need for the mentoring programme to cover a broad range of entrepreneurship aspects.

### 3. Team C

Team C already-established an online platform that connects local stores with customers. The platform allows stores to set up a digital shop window, including master data, logo, gallery, calendar and geolocation on a map. Further, within the platform, it is possible to create a seller's own product catalogue and even manage one's own warehouse with the help of a digital inventory. Users have the possibility to reserve certain items and look at the offers of local stores nearby. The goal is to encourage local purchasing, and reducing last mile logistics.

In terms of *Business Objectives and Goals*, the team was not able to name them which highlights the need for strategic business planning in the frame of the mentoring program.

The team identifies their primary *target group* as local businesses and professionals, with consumers as their final clients. However, there is some ambiguity in their target audience definition, suggesting a need for guidance on market segmentation and customer identification. The team uses Instagram, Facebook, and Google Ads for marketing and customer engagement. This shows some digital marketing skills, but there may be room for further development or diversification of their marketing strategies.

With regard to the major *challenges and problems* when developing their business, team C cites communication as their primary challenge. Specifically, they struggle with targeted communication to attract customers, explain the company's value proposition, and address investors. They also mention HR challenges in managing tasks and the team. The analysis of market competition is another area they find challenging. These insights suggest a need for training in effective communication, investor pitching, human resource management, and competitive analysis.

The team is attentive to software development *trends* and is keen on introducing new technology for their website in the future. They are also cognizant of pricing trends in e-commerce. This points to an interest in tech-based solutions and innovation.

Concerning *Knowledge, Know-how, Attitudes*, Team C recognizes the value of their diverse skill set, which includes marketing and communication, psychology, technology, and sales expertise. However, they express difficulty in managing this diversity, indicating a need for training in team management and diversity inclusion.

Finally, with regard to the expectations and *learning objectives*, they express a desire to learn about HR, pitching, funding, value proposition, and all aspects of communication. They are also interested in mentoring and meeting experts, which indicates an openness to external input and learning.

#### 4. Team D

The start-up of Team D was established in 2023 and aims to generate a standardized certification for water used in production processes. At the moment there are certification systems in existence but none for water. However, there is an increase in demand for regulation to certify certain aspects of water usage. Team D wants to offer a Certification system and consultancy services for sustainable management of water resources, providing companies with monitoring, improving and communicating the negative impact on rivers and water.

In terms of *Business Objectives and Goals*, the team was not able to name them which highlights the need for strategic business planning in the frame of the mentoring program.

The team identifies business/private companies as their primary *target customers*, although they are still unsure of their exact target market. This indicates a need for training in customer

identification and segmentation. However, with regard to *Resources and Support*, the team does not currently have any specific plans for reaching and engaging with their target audience. Their preliminary idea is to cold-call companies. This suggests a lack of a solid marketing plan, indicating a need for training in marketing strategies and customer engagement.

Team D finds the starting point in terms of the market situation a primary *challenge*. They are in search of the easiest way to implement their idea and find pilot companies. The team also finds validation problematic, followed by issues related to market and business models, as well as investor acquisition. This indicates the need for guidance in market research, business modelling, investor pitching, and startup validation.

Concerning *Trends and Innovation*, the team observes a gap in the market where no one certifies water, implying a potential business opportunity. They are also aware of emerging technologies for monitoring water and its impact. Additionally, they acknowledge the role of Corporate Social Responsibility (CSR) regulations in pressuring companies, suggesting they are aware of the regulatory landscape affecting their industry.

Regarding *Knowledge, Know-how, Attitudes*, the analysis showed that the team has expertise in management, international relations, and law but lacks environmental, engineering and scientific expertise. They have already contacted a few scientific institutes, companies, and universities for more ideas but want further technical and scientific guidance. This indicates a gap in their team's skillset that they are keen on addressing, either through mentoring or additional team members.

Finally, their primary *learning objectives* revolve around acquiring business-related knowledge and expertise for overall business management. They are also interested in digitalization for innovation and sustainability. The team hopes to find sustainable ways to run their start-up and sell their products. Therefore, the team would benefit from training in digital transformation, sustainable business practices, and the structuring of operations.

## 3.2 COMMON THEMES AND DERIVATION OF MENTORING TOPICS

The in-depth interviews and subsequent demand analysis with the four start-up teams identified several common themes and needs, which can be addressed through specific mentoring topics. The following six primary demands emerged, which are presented as follows.

### 1. Demand for a Business Model Development

Throughout the interviews, all teams revealed that one of their most substantial challenges lies in the creation of an implementable business model. This demand became prevalent as they recognized the importance of having a structured approach to effectively target their customer base, capitalize on their unique value propositions, and establish sustainable revenue streams.

For instance, Team A was primarily concerned with validating its business model and understanding whether its value proposition would be implementable or valuable for its target customers - restaurants and health-conscious individuals. They were looking for ways to start working on their revenue projections based on the validated business model.

Similarly, Team B expressed a need for understanding how to transition from their current project-based model to a more scalable product-based model. This transition directly ties into redefining their business model, which currently lacks scalability.

Team C identified their need for understanding how to monetize their product effectively, indicating the need for a robust business model. They were unsure how to price their product and were struggling with the challenge of making it affordable for users while still profitable for the company.

Team D also shared their struggle with identifying the most suitable business model, especially considering their focus on sustainability. They found it challenging to balance their environmental goals with the commercial viability of their venture.

Hence, all teams emphasized their need for guidance in developing their business models - from understanding their customer segments to creating value propositions and determining revenue streams. This common demand among the teams aligns well with the Fraunhofer IPK's "Business Model Development" mentoring topic, which can provide the teams with a structured approach to developing a robust business model.

This topic can guide start-ups through the process of defining their customers, identifying and communicating their unique value proposition, exploring different revenue streams, and creating a profitable business structure. This support can prove instrumental in helping the teams navigate their current challenges and creating a business model tailored to their unique needs and market conditions.

## 2. Demand for Technical Feasibility and Product Development Skills

A recurrent theme derived from the interviews is the teams' collective demand for further insights into the technical feasibility of their concepts and the subsequent product development process. Each team illustrated unique challenges that signal a necessity for guidance in transforming their innovative ideas into concrete, market-ready solutions. This observed demand directly aligns with the mentoring topic offered by FEA, namely, "Your Idea Pitch: from Tech Feasibility to Product Development".

The team A specifically highlighted the need to test the applicability of their value proposition within the real-world context of the restaurant industry. To ensure their offering is not only valuable but realistically implementable, they expressed the need to engage directly with potential customers, the restaurants. This indicates a need for the team to understand and apply product testing and validation methodologies to their idea, a topic that FEA can expertly address.

Team B's concerns similarly pointed towards a desire for greater technical feasibility and product development insights. A dedicated mentoring session focusing on refining their product development strategy would help them build a scalable product, a key requirement for long-term business viability.

Team C showed a need for technical feasibility and product development skills when they expressed difficulty deciding on the right pricing model for their product. An understanding of the perceived value of their product to their potential customer base and its competitive positioning would significantly assist in formulating an effective pricing strategy.

The team D presented a unique challenge. They need guidance to develop a product that balances their commercial aspirations with their commitment to environmental sustainability. They would benefit from insights into how to integrate these potentially conflicting goals into a unified, marketable product.

Given these articulated demands, FEA's mentoring on "Your Idea Pitch: from Tech Feasibility to Product Development" could be instrumental in providing these start-ups with practical guidance. This can involve the introduction of tools to validate their technical concepts, guidelines to structure their development processes, strategies to effectively communicate their product's unique selling points, and methods to validate the product with their target market. Through this targeted mentoring, the teams can improve their product development strategies, ultimately leading to more robust and market-ready solutions.

### **3. Demand for Access to Finance and Understanding Funding Mechanisms**

An apparent need shared by the four teams is the necessity to secure financing for their operations and gain a more profound understanding of various funding mechanisms. This common concern directly correlates with Cleantech Bulgaria's expertise in "Access to finance and related funding".

Team A expressed a keen interest in learning how to find suitable funding options and enhance their networking skills for better funding opportunities. This indicates their awareness of the importance of securing adequate funding but suggests a need for guidance in accessing and effectively utilizing such financing.

Team B similarly expressed concerns about securing finance and the associated legalities. The team's unfamiliarity with the legal aspects of fundraising signals a clear demand for education about legal requirements and constraints when securing funding.

Team C, in its quest for international expansion, needs to comprehend the funding landscapes in different countries. Recognizing various funding mechanisms and the specifics of accessing finance in different markets will be critical to their growth and expansion strategy.

Team D underlined their need for assistance in managing their financial projections and understanding the implications of their financial decisions, reflecting a need for education in financial management and planning, which is essential for any successful fundraising activity.

Given these articulated demands, Cleantech Bulgaria's mentoring on "Access to finance and related funding" can provide crucial support to these teams. This mentorship can involve practical advice on developing a compelling pitch for potential investors, guidance on identifying suitable funding options, navigating the legalities of securing financing, and effectively managing the funds they acquire. Furthermore, it can include introducing them to various financing mechanisms available for start-ups in different stages and sectors. This targeted mentoring can significantly improve the teams' financial strategies, making them more attractive to investors and equipping them to better manage their financial resources.

#### **4. Demand for Crafting a Unique and Competitive Value Proposition**

The creation of a unique and competitive value proposition also emerged as a critical theme across the four start-ups.

Team A recognizes the importance of speaking with restaurants to verify if their value proposition is valuable and implementable, reflecting their understanding that a solid value proposition is central to their business model. Their reference to market analysis indicates the need to create a value proposition that sets them apart in a competitive market.

Team B highlighted its product's uniqueness but also showed concern about its practical implementation and acceptance by customers. This suggests a need to refine their value proposition to ensure it is both unique and practical, making it attractive to their target audience.

Similarly, Team C mentioned a distinct feature of their solution – the chatbot. However, they did not elaborate on how this feature creates unique value for their customers, indicating a need to clarify and enhance their value proposition.

Lastly, Team D was aware of the necessity to differentiate itself from competitors and mentioned using an eco-friendly approach. However, they need guidance in crafting this aspect into a strong, compelling value proposition.

Given these shared demands, LUISS's mentoring in "Value Proposition" development could provide invaluable assistance. This could involve guidance on identifying unique value points, aligning these points with the needs and wants of their target market, and effectively communicating this value to attract and retain customers. This mentoring will help start-ups to create a strong, competitive position in the market, contributing significantly to their overall business success.

#### **5. Demand for Comprehensive Business Planning**

Furthermore, comprehensive business planning emerged as a common demand across the teams.

Team A noted its intentions to improve networking skills, refine their business model, and explore funding options. These varied objectives underscore the need for a comprehensive business plan that ties together these diverse components into a cohesive strategy. They

further expressed their goal to launch their service in 2024 and start turning a profit in 2025, underlining the need for a well-laid plan to guide them towards these milestones.

Similarly, team B mentioned the need for guidance in developing a business plan, emphasizing the importance they place on setting clear business objectives. Their interest in expanding into the European market underscores the need for a detailed business plan to help them navigate this ambitious growth strategy.

Team C showed an understanding of the importance of a business plan but acknowledged they need guidance to prepare one. The team members aim to improve their business planning skills to ensure their business' sustainability.

Lastly, Team D mentioned their interest in exploring different revenue streams. Their ambition to expand their product line points towards the necessity for a comprehensive business plan that maps out the steps required to achieve these goals.

Considering these shared demands, Corallia's mentoring in "Business Planning" will be relevant. This could involve helping to formulate the teams to define their business objectives, plan their operations, create financial forecasts, and devise marketing strategies in the frame of a comprehensive business plan. With a comprehensive business plan, these start-ups can have a clear roadmap to guide them towards their business objectives.

## 6. Demand for Crafting a Successful Investment Pitch and Understanding Funding Needs

Crafting a successful investment pitch and accurately quantifying funding needs emerged as shared demands among the teams.

Team A identified the need to improve their networking skills to find suitable funding options, signifying a clear demand for guidance in crafting an impactful investment pitch. They aim to gain the confidence and skills necessary to effectively engage potential investors. The team also showed an interest in setting up a financial plan, indicative of their need to understand and articulate their financial requirements accurately.

Similarly, team B highlighted its challenges related to financial planning and stated their intent to learn more about finance and management. This resonates with a need for crafting a persuasive investment pitch and a solid understanding of their funding requirements.

Team C acknowledged their lack of business knowledge and expressed their desire to improve their understanding of business operations. This points towards the need for a structured pitch that effectively communicates their business potential and a clear understanding of their funding needs to ensure operational success.

Lastly, team D has the challenge of finding the right funding and support, which links to the need to create an influential investment pitch. They aim to understand their financial requirements better to ensure the sustainability of their business.

Given these shared demands, EBAN's mentoring module in "Investment Pitch and Quantifying Funding Needs" will be relevant for the teams. It could involve assisting the teams in

developing compelling investment pitches, understanding their funding needs accurately, and learning how to approach potential investors effectively. With these skills, the teams will be better prepared to secure the necessary funding to drive their business growth.

### 3.3 SUMMARY OF DERIVATED MENTORING MODULES

Based on the results from the demand analysis presented above, the following mentoring modules have been selected:

- Mentoring Module 1: Business Model Development (Expert: Fraunhofer IPK)
- Mentoring Module 2: Crafting a Unique and Competitive Value Proposition (Expert: LUISS)
- Mentoring Module 3: Your Idea Pitch: from Tech Feasibility to Product Development (Expert: FEA)
- Mentoring Module 4: Investment Pitch and Quantifying Your Funding Needs (Expert: EBAN)
- Mentoring Module 5: Entrepreneurial Business Planning (Expert: Corallia)
- Mentoring Module 6: Access to Finance and Related Funding (Expert: Cleantech Bulgaria)

This logical sequence ensures that each module builds on the one before it, leading to a comprehensive and robust learning path, from conceptualization to financing. It helps the teams ensure that their business decisions are customer-focused, investment-friendly, and strategically sound.

*Business Model Development* forms the basis of any startup journey. It helps startups understand their business's core structure, including key partners, activities, resources, customer relationships, channels, and revenue streams. By having this as the first step, teams can gain a holistic understanding of their business, which can guide all subsequent decision-making.

Once the business model is developed, the teams need to articulate their *value proposition*, which is a clear statement about the outcomes that an individual can realize from using their products or services. It is essential to determine this early because it defines the unique value the startup offers to customers and sets it apart from competitors. It is also a critical input to the product development, pitching, and business planning processes.

With a clear value proposition, the teams are better equipped to analyze the *technical feasibility* of their products or services and develop them accordingly. It enables them to ensure that what they are developing is not just technically feasible but also aligns with what their target customers find valuable and how an investor can understand and value their technological proposal.

Once the offering is developed, the teams might need knowledge on how to attract investment to further develop their business idea. At this stage, they have a clear idea of their business

model, value proposition, and product feasibility, which can be used to develop a compelling *investment pitch*. It is also the right time to *quantify funding needs* as the team would have a better idea of the costs involved in product development and business operations.

After the investment pitch, startups and teams need to delve into more detailed *business planning*. The business plan incorporates all the previous elements (business model, value proposition, product, and funding needs) but also includes more comprehensive information on market analysis, marketing and sales strategies, and financial projections.

Once the business plan is complete, it can be used to secure financing. At this stage, startups learn about different types of *financing and funding opportunities* available to them. They also learn how to approach potential investors, which requires a thorough understanding of their business model, value proposition, product, investment pitch, and business plan.

### 3.4 STRUCTURE OF THE ENTREPRENEDU MENTORING PROGRAMME DERIVED FROM THE DEMAND ANALYSIS

This section introduces the rationale for the overall structure of the mentoring programme and discusses its distinct phases. The programme follows a blended learning approach that combines live mentoring and interaction with E-Learning to create a transformative educational journey for its participants.

Figure 1 depicts the different phases, learning depth and content structure of the mentoring programme. The structure of the programme was inspired by the results of the demand analysis. The results indicated that the teams and start-ups are located in different geographical regions of Italy and possess varying skill levels and experiences. Hence, a blended learning approach enables the participants to join the programme from their respective geographical regions and can be adjusted to their respective skill levels. The methodical preparation constitutes phase one where the content is standardized, aiming to transfer basic knowledge via online-based formats such as webinars and training videos. This content is identical for all participants of the first cohort and also includes a small learning success control which can be conducted using a quiz format.

The second phase is focused on development and entails more advanced learning experiences that are customized to the participants' needs. This phase takes place in a live mentoring setting that entails interaction between the mentor and the participants. Therefore, workshops, Question & Answer sessions and individual mentoring are all viable formats for this phase.

Lastly, the closing phase focuses on reflection and feedback. Here the participants come together with the mentor for one last time to evaluate their progress, development and achievements of their goals.

FIGURE 2: BLENDED LEARNING STRUCTURE

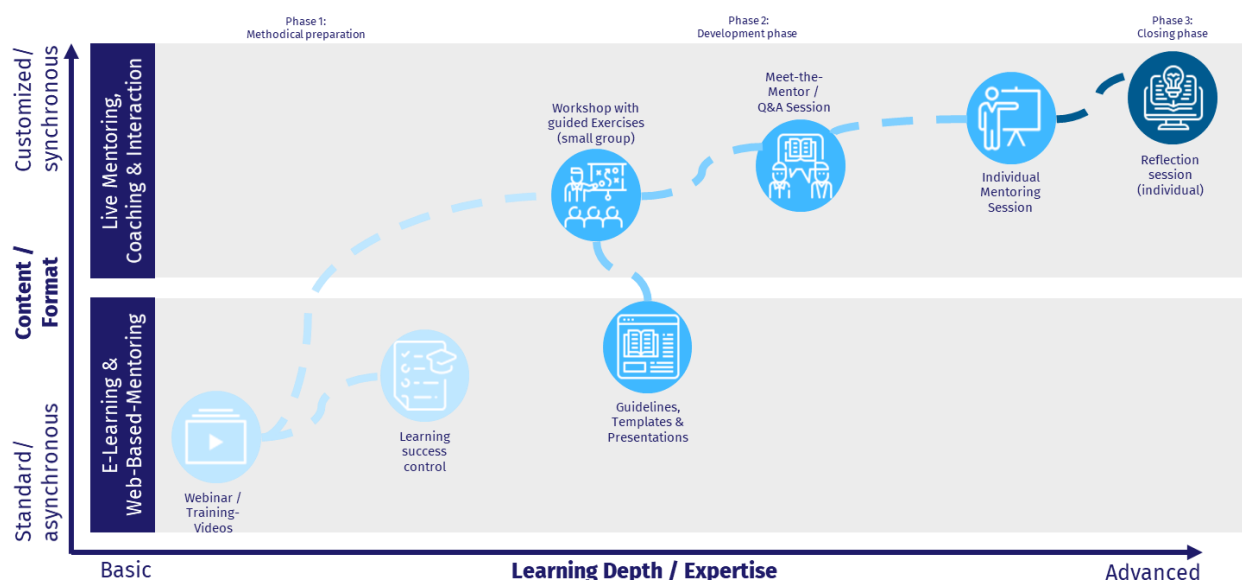

Table 1 provides a comprehensive overview of the mentoring program's three distinctive phases, detailing their respective mentoring units, elements, and objectives, as well as the duration and planned dates for implementation. Phase one is slated to commence in October 2023, serving as the initial stage of the program. Its duration is set at four hours, during which participants will receive essential guidance and support to lay a strong foundation for their entrepreneurial journey.

Spanning from October 2023 to February 2024, phase two constitutes the most extensive segment of the mentoring programme. This phase will provide participants with a substantial five hours of mentoring, aiming to delve deeper into various aspects of their start-up ventures, fostering comprehensive skill development and knowledge enhancement.

The final phase, scheduled for March 2024, encompasses a one-hour mentoring reflection session, representing the shortest duration among the three phases. Combining the durations of all three phases, the mentoring programme will provide a total of ten hours of valuable mentorship to each participant. This extended support seeks to maximize the potential of the first cohort of teams and start-ups and contribute to their long-term success. Considering the participation of six mentoring organizations, each start-up within the first cohort is set to benefit from a total of 60 hours of mentoring.

## 4 CURRICULUM FOR THE MENTORING PROGRAM

Each mentoring partner will provide a curriculum that begins with a clear outline of the goals and objectives of the mentoring programme. Further, based on the need analysis and expertise of each mentoring partner will define the core subjects that the program aims to impart to the mentees. Each topic will directly support the achievement of the program's objectives. For each topic, the curriculum will define the expected learning outcomes. This helps to clarify what each mentoring module should contain. Content & Resources which includes the materials, resources, and activities that will be used to teach each topic as well as the different applied mentoring methods will be outlined in the curriculum. Further, the curriculum will outline the sequence in which the topics will be covered, as well as the timeline for the entire mentoring program. The curriculum will also define how the progress will be assessed and how feedback will be given.

## 5 IMPLEMENTATION PLAN

This section presents the implementation plan for the mentoring programme, which has been designed to foster the growth of the most promising teams and start-ups hailing from the Hackathon in Rimini, Italy. The systematic implementation of the mentoring programme entails a series of meticulously orchestrated stages, each marked by significant milestones and underpinned by the concerted effort of key stakeholders.

**Demand Analysis (July 2023):** In pursuit of identifying the most promising teams and start-ups, four finalists hailing from Rimini have been chosen to partake in the mentoring programme. They have demonstrated notable potential, and their selection aims to foster their growth and contribute to the overall innovation landscape. During the initial phase of July 2023, Fraunhofer IPK carried out a thorough demand analysis in collaboration with the selected winners. The outcomes of this analysis were utilized to fine-tune and finalize the topics to be encompassed within the mentoring program's comprehensive curriculum.

**Content Development (August 2023 - September 2023):** Upon the conclusion of the demand analysis, the mentoring partners, equipped with the knowledge of the start-up's requisites, shall commence the development of content. This includes the creation of presentations, workshop materials, and other learning resources that are designed to address the respective

topics effectively. The developed content will be stored on the F6S platform, an online tool used for easy content sharing and management.

**Introduction Meeting (Beginning of October 2023):** A vital juncture in the implementation timeline is the formal introduction meeting. This gathering serves as a platform for mentors and start-ups to establish contact with each other, facilitated via Microsoft Teams. Additionally, it acts as an opportunity to clarify the structure of the program, set expectations, determine skill levels and ideal starting modules as well as elucidate any guidelines that need to be adhered to throughout the course of the program.

**Mentoring Program Execution (October 2023 - March 2024):** With the commencement of the mentoring program in October 2023, each participating start-up is allocated 60 mentoring hours, distributed equally among the six mentoring entities. These mentoring sessions will be carried out via Microsoft Teams to ensure seamless communication and interaction. In order to monitor the progress and make necessary course corrections, periodic check-ins will be facilitated between October 2023 and March 2024.

**Program Evaluation and Feedback Collection (March 2024):** Upon completion of the mentoring program, a feedback collection drive is initiated, involving all stakeholders and participating start-ups. This feedback will provide valuable insights into the efficacy of the program and help in identifying areas that require further improvements. LimeSurvey, a tool developed by Fraunhofer, will be employed to conduct learning quizzes, assisting in capturing feedback and understanding the learning outcomes.

In terms of resources, this program necessitates the expertise of mentors from each entity to develop and deliver the sessions, logistical arrangements for the introduction meeting and check-ins, technological tools for delivering the mentoring programme and preparing the associated materials, such as the F6S platform, LimeSurvey, and Microsoft Teams.

With regard to responsibilities, the stakeholders involved encompass Fraunhofer IPK, LUISS, FEA, EBAN, Corallia, and CTBG, each tasked with the preparation and delivery of respective mentoring modules. The start-ups are required to actively engage in the programme, provide regular feedback, and implement the acquired knowledge in their business operations. Besides, Fraunhofer as task leader will oversee the entire process, managing program logistics, coordinating with mentors and start-ups, facilitating check-ins, and managing program evaluation.

## 6 EVALUATION OF THE PROGRAMME

This section describes the evaluation methodology and outlines the schedule for data collection, analysis and potential improvements.

To ensure the continuous enhancement of the mentoring programme, a comprehensive evaluation approach will be employed. The evaluation will begin after the end of the programme in March 2024 and will primarily consist of gathering feedback from participating

teams, start-ups, and mentors. This feedback will serve as a critical component in refining the mentoring programme, its structure, and themes. Feedback will be collected from participating teams and start-ups of the mentoring programme who will be invited to share their valuable insights through a post-programme survey.

The survey will cover various aspects of the programme, including their overall experience, mentorship quality, and perceived impact on their projects. The mentors who contributed with their expertise and time to the mentoring programme will be approached for feedback on the effectiveness of their mentorship, the challenges encountered, and suggestions for improvement. Upon completion of the mentoring programme, all collected feedback will be cautiously analyzed. The goal is to identify trends, common themes, and areas requiring improvement. Based on the insights obtained from the data analysis, specific derivations will be formulated to enhance the mentoring programme. These derivations will be aimed at addressing any identified issues, optimizing the programme's structure, and refining the thematic focus to better meet the needs of the participants.

## 7 CONCLUSIONS

---

In this report, we have outlined the task of developing a mentoring programme for the ENTREPRENEDU Project. Guided by an extensive demand analysis, the programme has been designed to reflect and respond to the unique challenges and opportunities of the entrepreneurial ecosystem in our target regions. This critical examination of needs and corresponding programme design is an emblem of our commitment to a nuanced and adaptable approach to entrepreneurship development.

The objective of this report was to conceptualize and outline a mentoring programme that is both robust in its foundational structure and flexible enough to accommodate a diverse range of entrepreneurial pursuits. We aimed to ensure that this programme offers a comprehensive learning journey, from ideation to strategy execution, for the participating teams. Reflecting upon the development process, the achievement of this objective is evident in the structured six-module approach and the innovative integration of e-learning with interactive mentorship.

The implementation plan, set to begin in October 2023, ensures the transition of these insights from paper to practice. This marks a significant milestone for the ENTREPRENEDU Project and further underscores the project's vision of fostering a vibrant entrepreneurial culture within Europe. The selected start-ups and teams from the Hackathon, stand as the vanguard of this mentoring journey.

As we move forward, continuous refinement and enhancement will be critical. This includes a commitment to a feedback-driven approach and an openness to iterative evolution, ensuring the programme's effectiveness, longevity, and scalability. The ENTREPRENEDU Project's mentoring programme, while at its inception, aims to make an impact on entrepreneurship within the European Union.
